

The AI teammate that watches your product 24/7,
so things don't slip past you.

THE PROBLEM

Insight is scattered across *multiple tools*.
Nobody has time to *stitch it together*.

THE SOLUTION

AI that *monitors everything*, investigates across tools,
and tells you *what to do next*.

TL;DR - Identifies insights you'd normally miss

Spots drop-offs, anomalies and pain points *before you do.*

Tells you what happened

34 tickets in 72h: Promo code applied but not reflected in final charge

Recurring theme · 28 unique users · 4 high-value accounts affected.

WHAT HAPPENED

Source: Zendesk

A cluster of 34 support tickets filed in the last 72 hours all describe the same issue: users apply a valid promo code at checkout, see a "Discount applied" confirmation, but the final order total reflects the original price. The issue spans mobile and web. 4 tickets are from Enterprise plan users with ARR above ₹5L each.

#ZD-8851

"The promo code works. I can see the discount in the cart summary. But when I complete payment the receipt shows full price. Feels broken."

Shows you the reference user sessions

Session #1 · 22s

User tapped 'Proceed to Checkout' 4 times. Button animated on tap but no navigation occurred. Abandoned after 22 seconds.

Session #2 · 34s

User scrolled cart page, tapped checkout, waited 8s, scrolled, tapped again. Left the app after 34 seconds of no response.

Session #3 · 18s

User tapped checkout. Page loaded partially with the address form visible but payment section blank. Closed tab after 18 seconds.

Investigates across *analytics, session replays, and error logs* to land on the root cause.

INVESTIGATION LOG

5 checks · 4 tools · 26 mi

- 1

Ticket clustering

08:12 IST · Zendesk

Scanned 142 new tickets from the last 72h. Identified 34 mentioning promo / coupon failures at checkout. Clustered by issue similarity — all 34 describe the same pattern: discount appears applied in the UI but the charged amount reflects the original price. No similar cluster in the prior 30 days.
- 2

Verified discount not reaching payment

08:18 IST · Mixpanel · BigQuery

Cross-referenced 12 user IDs from the ticket sample with Mixpanel events. All 12 fired `checkout.promo.applied` followed by `order.completed` — but BigQuery order totals match the pre-discount price for every transaction. Discount registered client-side, never passed to payment.
- 3

Promo codes themselves are valid

08:22 IST · BigQuery

Queried the promotions table. SUMMER25, FLAT15, WELCOME10 are all active, within validity dates, under usage limits. Codes aren't the problem — the failure is in how the discount is applied at the transaction level.
- 4

Reviewed 6 session replays

08:28 IST · PostHog

In all 6 sessions, the promo input accepts the code and shows a green "Discount applied" badge. Cart summary updates to reflect the discounted total. But on the final order confirmation, the total reverts to the original — most users didn't notice until the receipt arrived.

◆ ROOT CAUSE

08:38 IST

Discount not persisted to order object

Backend integration issue between cart and payment services. Discount applied client-side but not passed through to the gateway. First ticket filed 72h ago — likely tied to that deployment window. 28 unique users affected; the bug hits all promo-code usage so the actual affected population is larger than support tickets reflect.

SUGGESTED ACTION

Escalate: promo discount not persisting to payment

Create issue in Linear →

SUGGESTED ACTION

Update order-service to forward discount payload

Create hotfix in GitHub →

ASK SQUASH

A context-aware copilot that already knows *your product, users, and data.*

01 ASK ANY DATA QUESTION

Where are users dropping off in checkout this week — and is it concentrated anywhere?

Checkout funnel — last 7 days

⚠️ 36% drop at the payment step — 2.1× the prior week. Almost entirely Android, 18–24 cohort.

02 DRAFT CONTEXT-AWARE ARTIFACTS

Create a Jira ticket for the promo-code drop bug on Android — link the funnel above.

Jira

CREATED

Promo code dropped on payment retry (Android)

SQ-503 · P1 · 5 pts · @priya

Story: As an Android shopper, my promo code should persist across payment retries.

ACCEPTANCE

- Promo persists on retry within session
- Cart total reflects discount on retry
- Event `checkout.promo.reapplied` fires once

03 SURFACE WHAT CUSTOMERS COMPLAIN ABOUT

What are customers complaining about most this month — across Zendesk, Play Store and App Store?

Recurring complaints — last 30 days

351 mentions · 3 sources

UPI payment fails on retry

TOP

🔗 Got 'Insufficient balance' once, retried with another bank — same error. Had to pay COD.
184 mentions · Zendesk · Play Store

Cart shows in-stock, checkout says sold out

RISING

🔗 Three items in cart for two days. At payment, two went 'out of stock' — wasted my time.
96 mentions · App Store · Reddit

Delivery date slips after order placed

CHURN RISK

🔗 Promised Tuesday at checkout, app said Friday after order. No notification — found out by chance.
71 mentions · Zendesk · Twitter/X

⚠️ Payment + delivery complaints are 78% of feedback this month — up from 41% last month.
Worth a release-quality review before peak sale.

Your sharpest PM teammate, wired into analytics, sessions, tickets, and your backlog. Ask anything and get the assistance of someone who's read everything.
